## UNaLab Technical Handbook of Nature-based Solutions

- Tue, 10/09/2019
- NBS
- **Partner**
  
- **Document**

The UNaLab project has developed a first draft version of its Technical Handbook of Nature-based Solutions. The handbook provides accurate, detailed information on the full range of potentially applicable nature-based solutions (NBS) to support urban climate and water resilience, their anticipated or demonstrated performance, and their limitations. This handbook will be a living document throughout the course of the project and the final version will be published towards the end of the UNaLab project. The final version can therefore be used both by the project's follower cities, as well as by cities beyond the UNaLab project.

This part of the handbook consists of a catalogue of NBS that primarily are useful for tackling the UNaLab cities' challenges related to water and climate adaptation.
