for Research & Innovation

Genova

- ▶ Genoa is narrow between sea and mountains: either are characterized by high biodiversity
- ▶ The urban environment has a low biodiversity percentage
- ▶ One of Municipality goal is to increase the links between sea and mountain through ecological corridors. They will increase the biodiversity also in the city

How the ecological corridors will be created

- ▶ Green spaces will be better linked one to each other
- ▶ Safeguarding the rivers (migratory birds use rivers as reference to migrate and they can stop during their trips)
- ▶ Increasing the permeable surfaces
- ▶ Safeguarding costalines (no more buildings...)
- ▶ Sustain the private gardens and green spaced maintenance
- ▶ Collaborating with other Public Bodies (Agencies, Region...)

Issues

- ▶ Anthropropic pressure
- ▶ High value of building land
- ▶ High maintenance costs
- ▶ Low perception of ecological corridors importance (citizens, politicians, business...)
